Ex 5a Simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP

Aim:

To design and develop an interactive **Fitness Tracker User Interface** using **Axure RP** by simulating the lifecycle stages of the **RAD (Rapid Application Development) model**.

Procedure:

Phase 1: Requirements Planning

1. **Identify Features:**
    - User login system
    - Dashboard to display fitness data
    - Activity selection (Walking, Running, Cycling)
    - Progress tracking (steps, calories)
    - User profile management
2. **Define User Actions:**
    - Login to the system
    - View daily fitness stats
    - Select and start workout
    - Track progress
    - View and edit profile
3. **Prepare Requirement Document:**
    - Listed all screens and functionalities
    - Defined user flow from login to profile

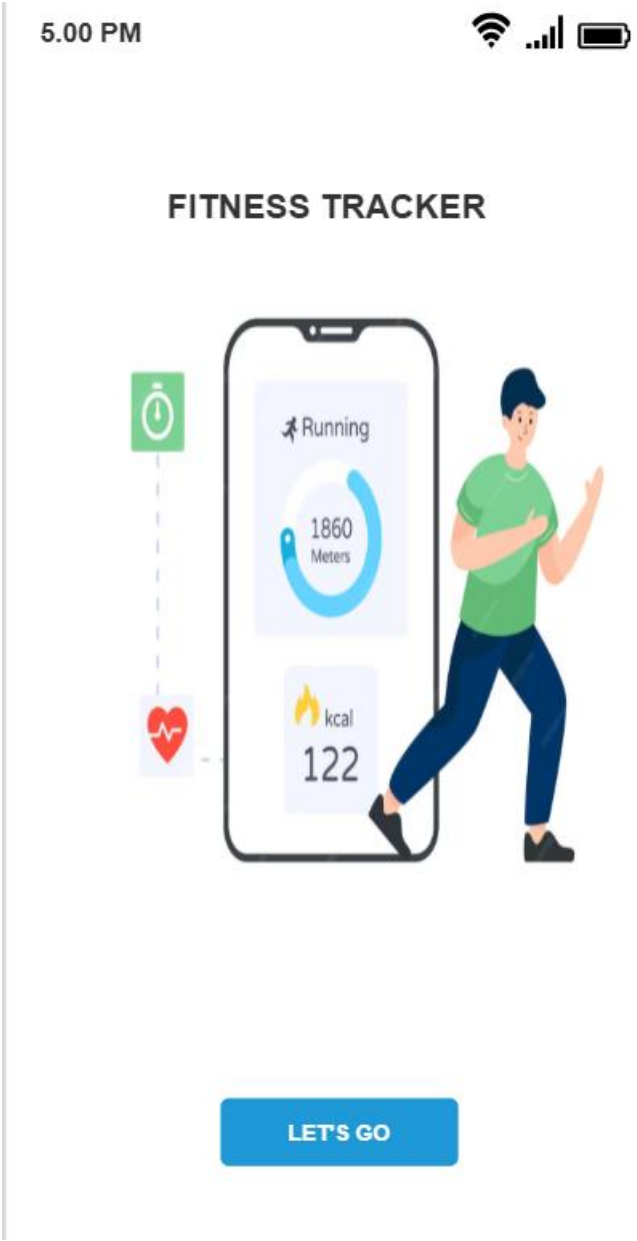
Phase 2: User Design

1. **Open Axure RP:**
    - Launch Axure RP software
    - Create a new project named **"Fitness Tracker App"**

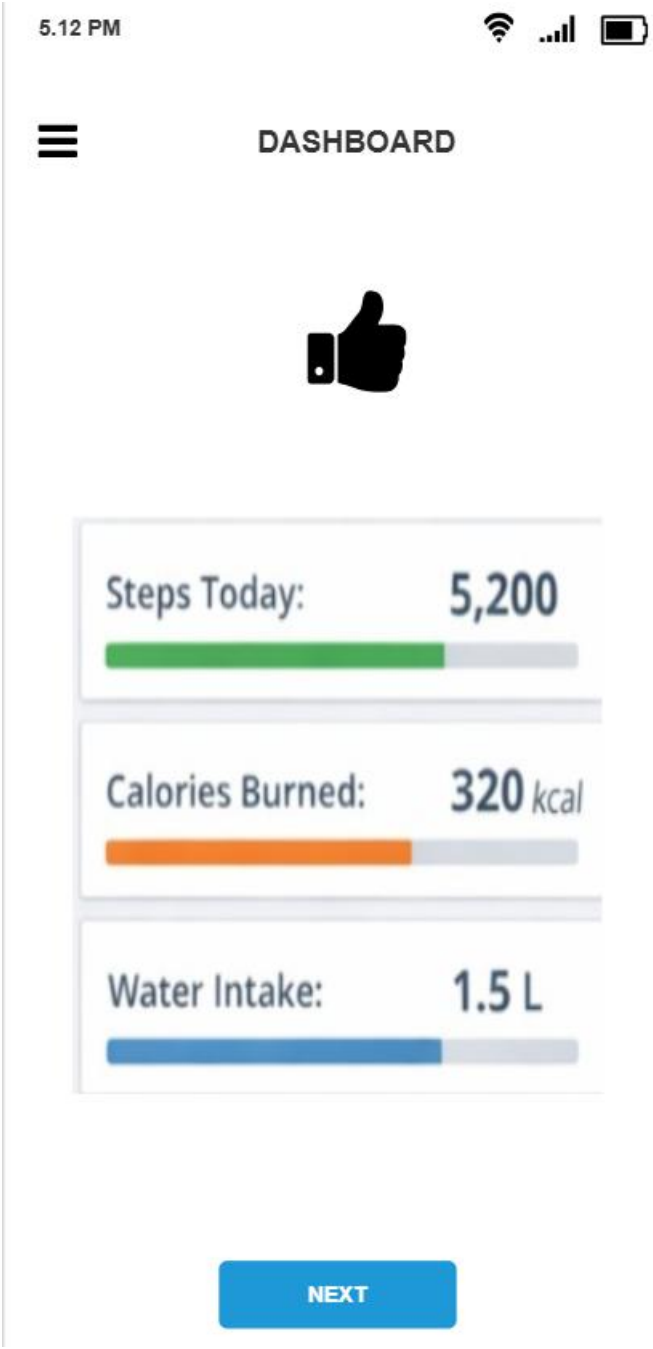
2. **Create Pages (Screens):**
    - Login Page
    - Dashboard Page
    - Activity Page
    - Progress Page
    - Profile Page

3. **Design Wireframes:**

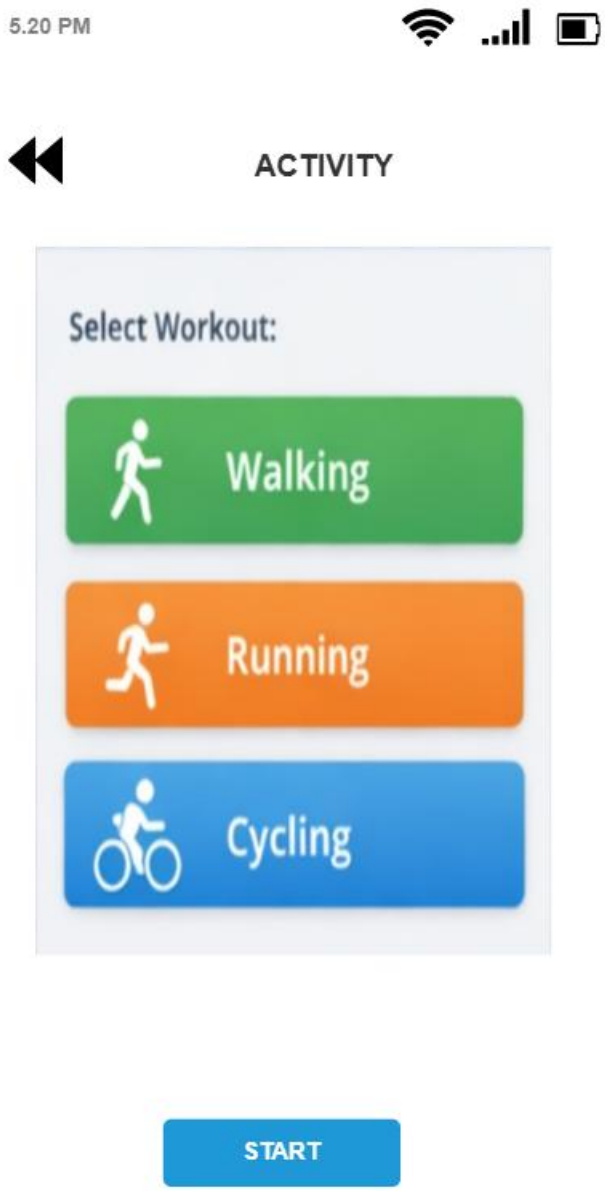
- **Login Page:**
    - Added text fields for email and password
    - Added login button



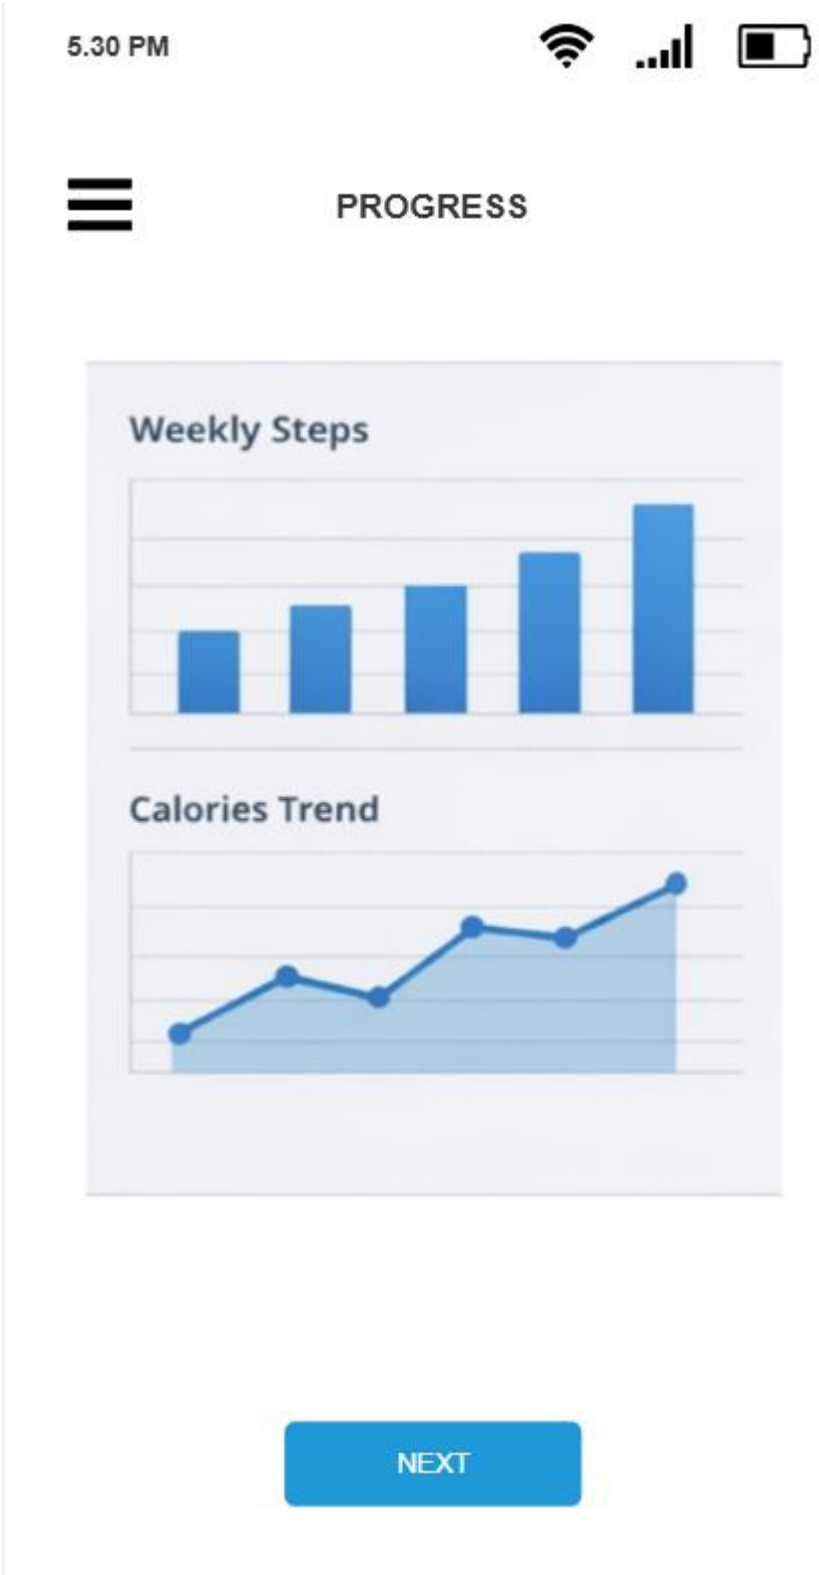
- **Dashboard:**
  - Displayed steps, calories, and water intake
  - Added progress bars
  - Included “Start Workout” button



- **Activity Page:**
  - Added options: Walking, Running, Cycling
  - Added Start button



- **Progress Page:**
  - Displayed weekly steps (bar chart)
  - Displayed calories trend (line chart)



- **Profile Page:**
    - Added user details
    - Included Edit and Logout buttons

4. **Add Interactions:**
    - Login button → Navigate to Dashboard
    - Start Workout → Navigate to Activity Page
    - Navigation buttons → Switch between screens
    - Logout → Return to Login Page

5. **Create Master Components:**
    - Designed a bottom navigation bar
    - Used it across all pages

6. **Add Annotations:**
    - Described purpose of each UI element
    - Explained navigation and user actions

Phase 3: Construction

1. **Develop Interactive Prototype:**
    - Added clickable buttons and navigation links
    - Used dynamic panels for interaction (if any)
2. **Preview Prototype:**
    - Clicked Preview option in Axure
    - Tested navigation between pages
3. **Iterate Design:**
    - Improved layout and interactions
    - Ensured smooth user experience

Phase 4: Cutover

1. **Finalize Design:**
    - Checked all screens and interactions
2. **Export Prototype:**
    - Published project to Axure Cloud / HTML

3. **User Guidance:**
    - Explained app usage
    - Demonstrated navigation flow

Result:

Successfully designed and developed an interactive **Fitness Tracker UI prototype** using Axure RP by following the RAD model stages.

Conclusion:

The RAD model enabled rapid development and iterative improvement of the UI. Axure RP helped in creating an effective and interactive prototype with multiple screens and smooth navigation.
