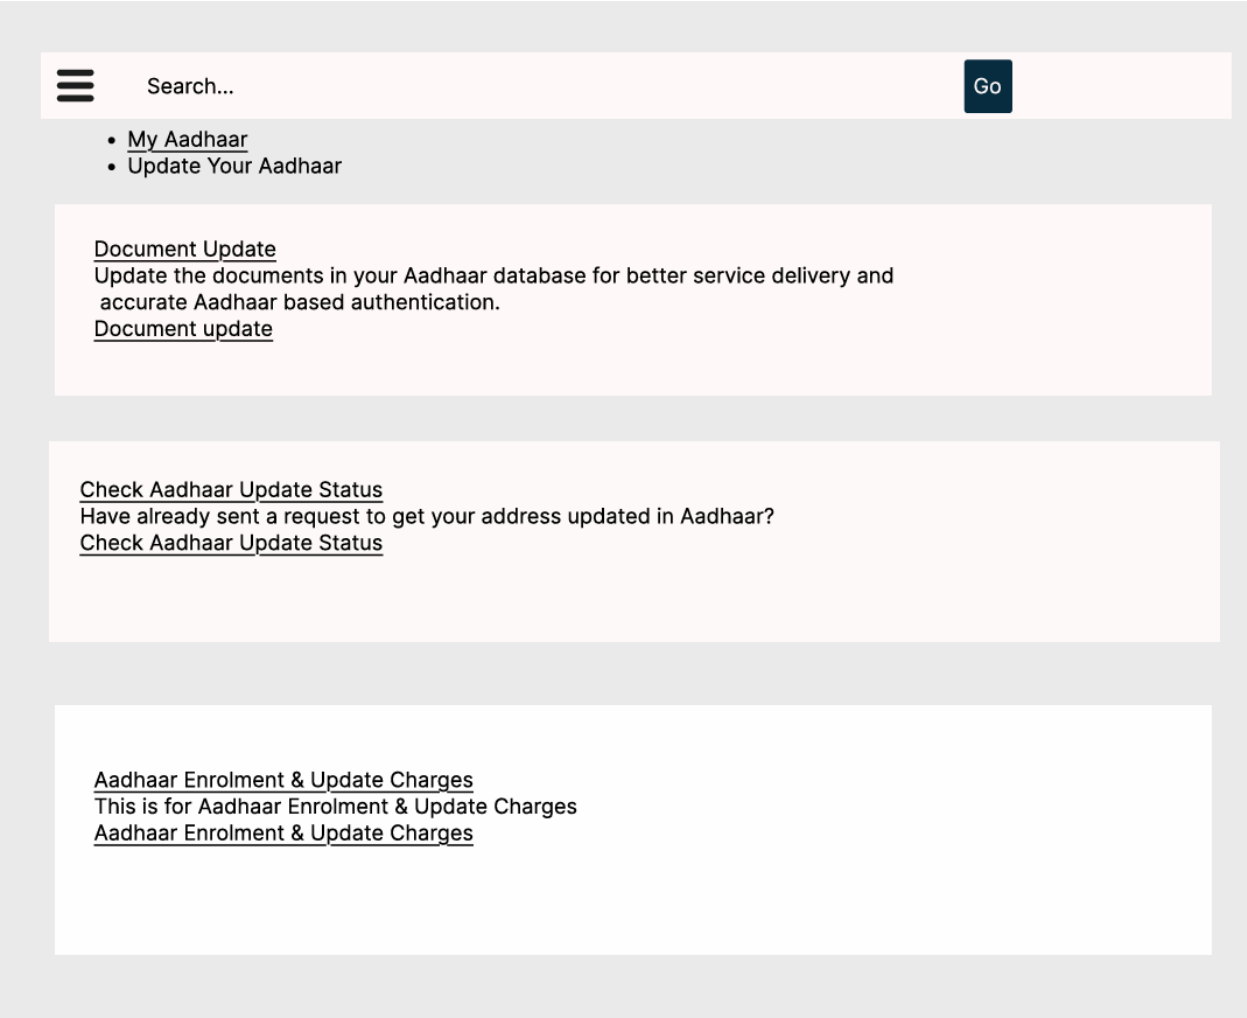
CS23A34-USER INTERFACE DESIGN

ROLL NO : 240701196 **DATE : 03.02.2026**

NAME : ISHWARYAA N

🚫 BAD DESIGN (AADHAAR PORTAL) :



🔹 Design Style

- **Plain, text-heavy interface with no visual hierarchy.**
- **No branding, government insignia, or identity markers.**
- **Sections look repetitive and cluttered.**

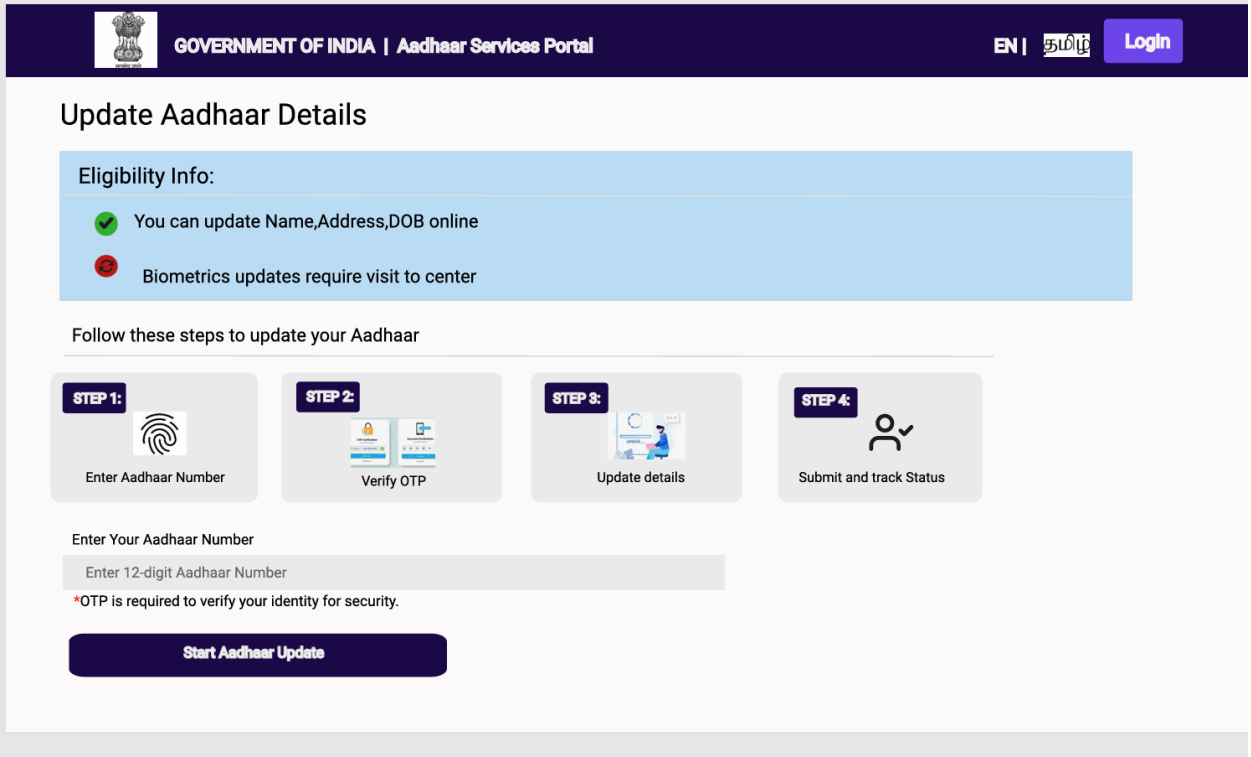
- No icons, step indicators, or visual cues to guide users.
- Feels outdated and unprofessional.

- **Content**
  - Redundant repetition of “Update” and “Charges” sections.
  - No eligibility information (what can/cannot be updated online).
  - No explanation of required documents or security measures.
  - Lacks clarity—users must guess the process.
  - Content is fragmented, scattered, and not user-friendly.

- **Navigation**
  - Multiple links with similar wording cause confusion.
  - No logical flow—users don’t know where to start.
  - No single entry point; users must click around blindly.
  - Absence of step-by-step guidance.
  - Navigation feels like a list dump rather than a structured portal.

- **Purpose**
  - Appears more like a static service list than an interactive portal.
  - Focused on displaying options rather than helping users complete tasks.
  - Poor alignment with user needs—no clarity on process or requirements.
  - Does not inspire trust or confidence in the system.

✅ GOOD DESIGN (AADHAAR PORTAL) :



- **Design Style**
  - Clean, structured layout with clear headings and sections.
  - Incorporates national identity symbols (सत्यमेव जयते, Government of India).
  - Uses checkboxes and step indicators for clarity.
  - Professional, modern look with emphasis on usability.
  - Balanced use of text and visuals.
- **Content**
  - Provides eligibility info (what can be updated online vs. at center).
  - Step-by-step instructions (Enter Aadhaar → Verify OTP → Update → Submit).

- Clear security note about OTP verification.
- Concise, purposeful, and user-focused content.
- Eliminates redundancy and focuses on action.

◆ **Navigation**

- Sequential navigation with numbered steps.
- Logical flow from login → verification → update → tracking.
- Single entry point ("Start Aadhaar Update") reduces confusion.
- Easy to follow even for first-time users.
- Smooth, guided experience.

◆ **Purpose**

- Purpose-driven: helps users update Aadhaar quickly and securely.
- Balances information (eligibility, security) with action (update steps).
- Designed to reduce errors and improve service delivery.
- Strong emphasis on user trust and efficiency.
- Aligns with citizen-centric design principles.

Comparison Table:

Aspect	Bad Design (Document 1)	Good Design (Document 2)
Design Style	Text-heavy, cluttered, no branding	Clean, structured, branded with national identity
Content	Redundant, fragmented, no eligibility info	Clear eligibility info, concise, step-by-step instructions
Navigation	Confusing, multiple similar links, no flow	Sequential, guided, single entry point, logical flow
Purpose	Service-list oriented, lacks clarity	Purpose-driven, user-centric, secure, efficient
User Guidance	None, users must guess	Step indicators, OTP verification, clear instructions
Trust Factor	Low—outdated and confusing	High—professional, secure, citizen-focused

Final Conclusion :

It offers:

- Clear navigation and structured workflows.
- Better accessibility and multilingual support.
- Enhanced user experience with security and eligibility info.
- Higher efficiency and reduced cognitive load.
